

KLD Guitar Effect Pedal

RAT

Distortion Effect Pedal

Kailing Electronic co.Ltd
<http://www.kldguitar.com>

Thank you for purchasing the Kldguitar RAT !

The Kldguitar RAT is used as a primary distortion, it excels at arena rock rhythm tones and soaring leads. Do you have a powerful amp with too much headroom for the gig? The RAT nails that sweet spot where a tube amp goes from sparkly clean to warm overdrive. Maybe you already love your amp's distortion. Use the RAT as a boost for solos and get the extra kick you need

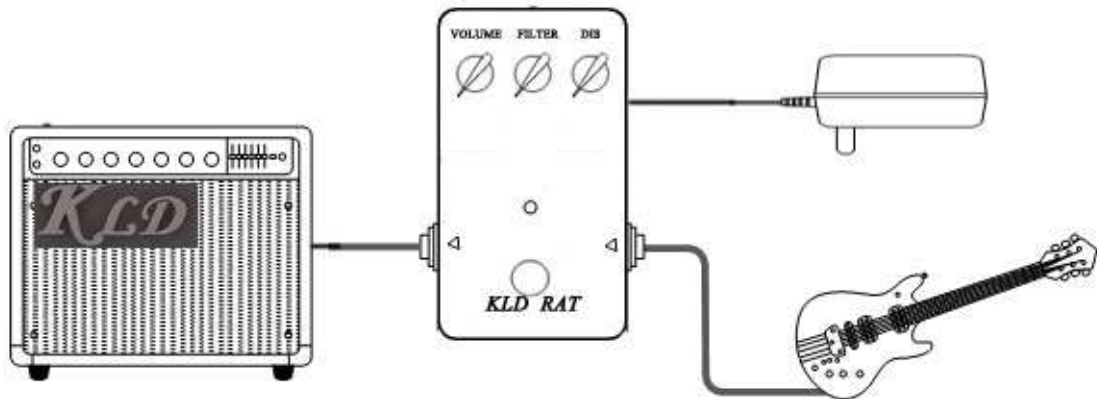

NOTES

- unplug the instrument when not in use.
- You will hear some loss of level and distortion when the battery begins to run down.
- When using external power source, we recommend you use our adapter.
- Do not remove the screws on bottom.

SPECIFICATIONS

- 100% analog signal path
- 100% hand made , No SMT
- Controls: DIS,FILTER, VOLUME
- Strong virtually indestructible steel enclosure
- Heavy-duty, industrial footswitches, Check knobs
- Sloped face for easy stomping
- On/Off LED indicator
- True Bypass design
- High quality Rubycon's capacitors
- Military-spec glass-epoxy circuit board

OPERATION:

1 IN PUT:

Connect the input jack to your instrument or Send jack of amp which has FX loop. The circuit is automatically turned on when a plug is inserted.

2 OUT:

Connect the output jack to your amp input or Return jack of amp which has FX loop.

2. VOLUME:

Dial in the perfect amount of gain while keeping the level consistent with your clean tone.

3. FILTER:

Turn it CW to roll off brittle high-end frequencies.

4 . DIS:

The amount of distortion adjusts.

5 LED of ON/OFF:

Indicator comes on when effect is on. If it is dim or does not light, replace the battery.

6 EXT D.C. :

When using external D.C. supply, internal batteries are switched off.
